## INTRODUCTION

The Inuit Land Use and Occupancy Project was designed to be a means by which the Inuit of the Northwest Territories set down that phase of their oral tradition dealing with historic and contemporary man-land, man-water relationships. An immediate objective of the Project is to facilitate comprehensive and effective communication, in respect to this land use, between the Inuit of Canada and people living outside of the North.

Fieldwork in each of 33 northern communities was carried out between July 1973 and July 1974 and had the following main objectives:

- (1) To compile an objective record of the use of the land through each interviewed person's adult life. Such a series of individual records were subsequently aggregated into regional summations of land use.
- (2) To obtain a record of communities' 'ecological' (environmental) knowledge of the areas they have traditionally used and occupied.
- (3) To obtain a record of locations of known cultural, local and historical significance.
- (4) To assemble a global (all data) data-base, on computer tape, comprised of each interviewed individual's land use activity.

Results of objective (1) above, are published in Volumes 1 and 3 of the Report, Inuit Land Use

and Occupancy Project (1976). Together with all records relating to objective (1), information collected in pursuit of objectives (2) and (3) are housed in the Public Archives, Ottawa, though some of these data are published in Volume 1 of the above mentioned report.

The material assembled in connection with objective (4) above, namely the comprehensive land use data base, is published as an Appendix to the Report, Inuit Land Use and Occupancy Project, of which this individual document is a part. Fieldwork methodology and the rationale for compiling a comprehensive data-base are supplied in Volume 2, Report, Inuit Land Use and Occupancy Project, and the interested reader is referred to this publication for detailed consideration of these matters. Here it will suffice to say that a data record consists of a settlement (represented by a community number), an Individual number, Time period, Land Use classifications, and the geographic location (coordinates) of the particular land use.

A community number is assigned to each of the settlements and Individual numbers assigned by the coders as they begin coding each individual land use map. No Individual is assigned more than one number, even if he has resided in, or parts of his total land use activity occur in, more than one settlement.

An Index is retained by the Project Director, allowing access to any individual's land use biography.

Except for the communities of Gjoa Haven and Holman Island, land use activities were

recorded with respect to not more than three Time Periods. Time Period I relates to the early years of contact with Euro-Canadian society; Period II represents the years when fur-trapping was the basis of the northern economy and Period III the recent 'settlement phase' in the north characterized by a mixed, hunting and wage-employment economy. In the case of Gjoa Haven and Holman Island a fourth Time Period was necessary, due to a locally-perceived significant change during the recent settlement phase.

Each individual map biography returned from the field to the Project offices in Hamilton was sub-divided into 5 x 5 km squares by means of an appropriately marked clear acetate sheet; only those grid squares in which some land use activity occurred was coded for the data base. The coding procedure is described in a separate report obtainable from the Project Director.

Magnetic tapes are used as a storage medium for the data base, with each settlement's data stored as one of the files on 15 volumes of 2400 magnetic tapes. A set of these tapes is available for use from the Project Director, and a complete file is also housed in the Public Archives, Ottawa.

What follows in this document are tabulations of land use (for each category which was recognized during fieldwork) for each Individual interviewed in each of several communities. The computed areas of land use must be regarded as conservative figures, for reasons outlined in the methodology section reported in Volume 2, Report, Inuit Land Use and Occupancy Project.

These settlement data are summarized in Summary Tables, for each time period, and a Participation Rates Table is also provided so that some idea of the representativeness of the values computed can be gauged by the proportion of the local population reporting that given land use activity.

WESTERN ARCTIC: NOTE

Mackenzie Delta land use was collected on 1:250,000 N.T.S. maps. Elsewhere (including those portions of Delta residents' land use recorded here in the Yukon Coast-Delta tabulations) maps at a scale of 1:500,000 were used for fieldwork data collection.

The land use database was designed to accept only those data recorded at 1:500,000 scale, thus important land use activities (e.g., muskrat hunting) carried out in those parts of the Delta mapped at 1:250,000 scale is almost entirely absent from these tabulations.

Also absent are land use tabulations from Banks Island. Fieldwork in that particular community was not directed toward collecting standardized land use maps appropriate for the database, but rather was concerned with verifying data collected in another form in the immediately preceding past.

A 4x5 grid of 20 small, stylized icons. The icons are arranged in four rows and five columns. The first row contains five icons that look like stylized 'S' or 'Z' shapes. The second row contains five icons that look like stylized 'W' or 'M' shapes. The third row contains five icons that look like stylized 'J' or 'L' shapes. The fourth row contains five icons that look like stylized 'H' or 'A' shapes. The fifth row contains five icons that look like stylized 'X' or 'Z' shapes. The sixth row contains five icons that look like stylized 'O' or 'D' shapes. The seventh row contains five icons that look like stylized 'U' or 'V' shapes. The eighth row contains five icons that look like stylized 'F' or 'M' shapes. The ninth row contains five icons that look like stylized 'N' or 'M' shapes. The tenth row contains five icons that look like stylized 'A' or 'M' shapes.
